
PRESS RELEASE: Hines Industries and Veugen Integrated Technologies announce technical services partnership

February 15, 2015

Hines Industries, a leading provider of balancing machines and related quality enhancement machinery and services, has today announced a partnership with Veugen Integrated Technologies (VIT) to expand its technical service offering in Canada.

“We are excited about this collaboration with VIT” said Customer Service Manager Chris McFarland, “as it enables Hines to deliver a faster response time to our customers in Ontario, Quebec and the Maritime provinces.”

Under the terms of the partnership, Hines will continue to field first line technical customer service requests, with a clear service escalation procedure in which VIT technicians assure a rapid response to on-site service needs. VIT will work with Hines to seamlessly integrate initial service request, technical service delivery and trouble-shooting escalation procedures.

The partnership was announced today upon signing of the agreement.

About Hines Industries

Hines Industries is a leading supplier of custom engineered balancing machines and related quality control test machinery. Hines serves customers across a broad range of industries including automotive, heavy machinery, aerospace, energy, HVAC, agriculture and medical, with a customer base from small manufacturers and rebuilders to Fortune 500 firms.

More information about Hines is available online at www.hinesindustries.com.
